GENERAL PRODUCT CATALOGUE

yağmur teknik

yagmurteknik.com

There's an easy way!

The importance of heating in greenhouses is significant and multifaceted.

The heat required for plants to grow and develop healthily must be provided accurately and continuously.

We understand the importance of preserving quality and freshness throughout the process from food production to the table.

As a company with international experience in greenhouse heating, food drying and dehumidification,we are always by your side.

YTKB SERIES • 29-116 KW

3 Covers - Solid Fuel Boiler - Baffle Type Heating boiler

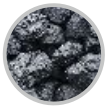

YTKB SERIES • 29-116 KW

comfortable, economic, ideal temperature...

WOOD

COAL

4 PASS
TECHNOLOGY

- Continuous / Night with Low Heat use
- Highly low fuel consumption with economizer option
- Flame retardants are the result of gas and boiler heating data in TSE norms.
- To ensure that the ash can plan for the discharge mechanical arm
- If you want, hot use can be achieved thanks to the boiler system that can be added to the boiler.
- YTKB type boilers are a good choice for all areas with their efficiency and high heating capacity.

YTP-S SERIES • 29-290 KW

Prismatic - Pipe + Baffle System - 3 Pass Floor Heating and Central System Boiler

YTP-S SERIES • 29-290 KW

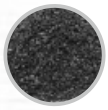

4 PASS
TECHNOLOGY

POMACE

PELLET

HAZELNUT COAL

BRASS COAL

- Use with economical fuels such as olive pomace, hazelnut coal, hazelnut shell
- Up to 35% savings, 30% reduction in waste material thanks to bottom fuel feeding
- Minimal wear due to heating with font casting combustion chamber
- Automatic operation, electricity and fuel saving with digital control unit
- It is easy to use, set up and maintain. ü Fans with speed and blade adjustment
- A good choice for all areas with its efficiency and high heating capacity

YTP-Y3G-K SERIES • 232-697 KW

Half Cylindrical - Smoke Tube - 3 Pass - Mixer - Round Pot - Central System Boiler

YTP-Y3G-K SERIES • 232-2326 KW

POMACE

PELLET

HAZELNUT COAL

BRASS COAL

The product shown features a special design that automatically cleans fuel residues accumulating in the pipes. It is manufactured with capacities ranging from 1,000,000 to 2,000,000 kcal/h.

- Use with economical fuels such as olive pomace, hazelnut coal, hazelnut shell
- Up to 35% savings thanks to bottom fuel feeding, 30% reduction in waste material
- Extended smoke path, reduction in flue gas temperature and fuel savings thanks to the three-pass system
- Minimal wear due to heating with font casting combustion chamber
- Working automatically with digital control unit, saving electricity and fuel
- Easy to use, adjust and maintain Fans with speed and flap adjustment
- A good choice for all areas with its efficiency and high heating capacity

YT-3G SERIES • 116-931 KW

Single and 2 Door - Half Cylindrical - Pipe - 3 Pass Central System Boiler

YT-3G SERIES • 174-581 KW

3 PASS
TECHNOLOGY

NATURAL GAS

DIESEL

- Natural Gas, Fuel-Oil / Diesel, LPG burning feature easy to use, adjust and maintain
- Extended smoke path, reduction in flue gas temperature and fuel savings thanks to the three-pass system
- High efficiency low fuel test with economizer option 1.5 times the operating pressure
- Extended boiler life with homogeneous heat transfer
- Thanks to the boiler or heat exchanger system that can be optionally added to the boiler, domestic hot water can be obtained.
- The three-pass system is a good choice for all areas with its efficiency and high heating capacity

YTMH/YTMH-K SERIES • 232-1162 KW

Semi-Cylindrical – Serpentine Piping – 3 Pass System Air Heater

YTMH / YTMH-K SERIES • 232-1162 KW

Efficiency and quality increase significantly in properly heated greenhouses.

DIESEL NATURAL GAS LPG

AXIAL FAN SNAIL FAN

It is manufactured with a centrifugal fan as standard.
You can select an axial fan depending on the application area.

- It produces the hot/dry air needed
- In Greenhouses/Poultryhousesor in the drying process in leather, paint, textile, grape drying, food and similar industries.
- Natural Gas, Fuel-Oil / Diesel, LPG burning feature, Easy and quick installation thanks to electrical connection.
- Extended smoke path, reduction in flue gas temperature and fuel savings thanks to the three-pass system
- Ideal for heating largevolumes such as chicken coops, greenhouses, factories, mosques, meeting rooms, sports facilities and restaurants.
- Economy and digital thermostat controlled burner with low investment and operating costs, safety thermostat
- Mono block body insulated with glass fiber, external protection against corrosion with sheets painted with electrostatic powder paint, and hot air regularly supplied to the environment with a radial fan, silent operation

SALYANGOZ FAN

AKSİYEL FAN

It is manufactured with a centrifugal fan as standard.
You can select an axial fan depending on the application area.

- Use with economical fuels such as olive pomace, hazelnut coal, hazelnut shell
- Up to 35% savings thanks to bottom fuel feeding, 30% reduction in waste material
- The right choice for drying fruits, vegetables, fertilizers and similar products with high air exchange coefficient and efficiency
- Working automatically with digital control unit, saving electricity and fuel
- Easy to use, setup and maintain
- Fans with speed and damper adjustment

An efficient and precise heating boiler means the right temperature, healthy growth, and economical production.

Proper heating in poultry houses is a fundamental element of healthy and efficient production. If the ideal temperature required by chicks from their earliest days is not maintained, growth performance may decline, feed conversion efficiency may drop, and the risk of disease may increase.

Modern heating boilers enhance animal comfort by ensuring uniform temperature distribution within the poultry house. A balanced thermal environment translates to reduced stress, healthier development, and superior production performance. At the same time, high-efficiency boiler systems contribute to lowering operating costs by reducing fuel consumption.
